

Off-the-shelf Compliance recording

Broadcasting corporations and media authorities are faced with and work on the basis of ever stricter compliance and risk challenges. Government legislation and regulations, liability issues and risk management policies have prompted many of the organizations involved to proactively record and archive TV channel output.

With the introduction of LIRA, its Live Recorder Appliance, Arbor Media introduces an easy-to-use, plug & play video recording compliance system, which is fully adapted to meet the needs and demands of broadcasters and media authorities.

LIRA records all incoming video channels in WMV proxy format, including two stereo audio channels for each video channel.

LIRA is web based and does not require the installation of any specific software locally. You can simply enter the URL of the LIRA configured system and start using it! All standard functionalities such as browse for video content, visualize and publish video fragments are available from the web client application, offering a thumbnail overview and easy navigation.

LIRA Broadcast Compliance Recording

LIRA is the ideal standard and therefore economically priced solution for the recording of up to 16 TV channels, TV channel monitoring, competition monitoring and internal evaluations. LIRA is available in multiple system setups, depending on the video source-signal format and the number of channels to be recorded. The standard storage capacity of the system is based on the most commonly required storage time by European media authorities of 90 days. Extensions of up to six months are available as an option.

LIRA's unique features

Arbor Media's LIRA offers you a number of unique and distinctive advantages:

- ▶▶ Standardized plug & play;
- ▶▶ LIRA hard- and software configuration adapted to required system configuration (channels and storage);
- ▶▶ High availability redundancy hardware including hard disk RAID setup and redundant PSU;
- ▶▶ Automatic 24/7 recording;
- ▶▶ Multiple user access via web browser interface;
- ▶▶ Cost-effective, innovative and easy-to-use product;
- ▶▶ Very limited learning curve: just connect, start and operate!;
- ▶▶ Remote management via web interface;
- ▶▶ Three specific versions: SD – SDI, HD – SDI and TSoIP (SPTS and MPTS);
- ▶▶ Possibilities to manually add metadata to files/clips before exporting them.
